

F27 Business Plan Agent — Requirements for Sign-off (v2)

BMO Private Wealth · Proof of Concept · 28 September 2026

Conversation

ID	Requirement	Target
A1	All twelve topics are reachable in the conversation	12 of 12
A2	Every value in Appendix A holds a value by the time the summary is reached. No question can be declined or skipped	28 of 28
A3	Each growth percentage is derived from one reusable formula and stated to one decimal place	4 of 4 fields within ± 0.1 pp of manual calculation, on 5 test values each
A4	Currency input is parsed correctly regardless of how the advisor phrases it	5 accepted formats per field; 100% parsed across a 20-prompt set
A5	Input the agent cannot use as an answer — unparseable, off topic, or a question back — results in the same question being put again. Nothing is stored and the conversation does not advance	20 prompts; 20 of 20 re-ask; 0 values stored; 0 advances
A6	Each answer is read back to the advisor and confirmed before it is stored	28 of 28 values confirmed; 0 stored without confirmation
A7	Rejecting a confirmation puts the question again and leaves no value behind from the rejected answer	5 of 5 rejections re-ask; 0 rejected values stored
A8	The agent does not ask again for anything it already holds	0 unprompted re-asks in a full run
A9	The value stored against each question matches what the advisor said. Figures exact; free text unparaphrased	28 of 28 match the transcript across 3 runs
A10	Next steps are stored as a single value, not split into separate action records	1 value stored; 0 sub-records
A11	Fixed-list fields store a value from the list, not free prose	Strategy and referral LOB: 2 of 2
A12	Captured values survive the length of a full session	0 losses over a 20-minute session

Navigation

ID	Requirement	Target
N1	The advisor can reach any topic from a menu available at any point in the conversation	12 of 12 reachable from 3 different entry points
N2	The advisor can redo a section they have already finished. Returning to a completed topic tells them it is already filled in and asks whether to redo it, rather than asking cold	12 of 12 offer the do-over prompt
N3	Declining the do-over leaves every value in that topic untouched	0 values changed
N4	A redone topic overwrites every value that topic owns. Changes apply at topic level, not variable level	Referral revenue redo replaces 2 of 2 values; 0 partial states
N5	Derived values are recalculated after a redo	4 of 4 growth percentages correct after a goal is changed

ID	Requirement	Target
N6	The advisor can restart the conversation at any point. Restarting asks for confirmation, clears every captured value, reloads the advisor profile and returns the advisor to the opening	0 values surviving; profile reloaded; welcome text redelivered
N7	Declining the restart confirmation leaves the conversation exactly where it was	0 values changed; the question that was on the table is put again

Script Fidelity

ID	Requirement	Target
B1	Every scripted element is delivered in its assigned topic, in full — option lists, framing statements, worked examples and links	5 option lists totalling 42 items; 3 framing statements; 1 worked example; 1 referral programme link — 100% delivered
B2	Instructional and explanatory text is delivered as written, except where the agent shows a shortened version to keep the conversation moving. Wherever a passage is shortened, the advisor can ask for the full version and gets it word for word	12 of 12 topics carry their instructional text; every shortened passage returns the full script text on request; 0 passages shortened with no way to see the full version
B3	The advisor can run the conversation in French. The language can be chosen at the start and changed at any point, and the conversation continues in the chosen language from that turn on, with every captured value kept	1 full run per language; language changed at 3 different points; 0 values lost on a change; 0 English strings shown after a change to French

Summary and Close

ID	Requirement	Target
C1	The agent replays every captured value as an on-screen recap inside the conversation	28 of 28 shown; ≤ 400 words; rendered in ≤ 10 s
C2	The agent does not advance to the summary until every question is answered. A question cannot be declined — the agent names what is outstanding and returns the advisor to it	0 entries to the summary with an outstanding question; 0 questions accepted as declined
C3	A visual of the completed plan is shown	1 visual covering the four quantitative goals and the seven qualitative fields
C4	One script serves all professional types. No role-specific wording, data points or option lists	1 script; 0 variants across IA, IC and PB
C5	On submit, every captured value is written to a SharePoint list, one record per completed plan	28 of 28 values written to a named column; 1 record per submission; 0 partial records

Guardrails and Data

ID	Requirement	Target
D1	The agent gives no investment, tax or compliance advice	25 probes; 25 of 25 declined and redirected within 2 turns
D2	Real BMO or client data is never accepted or acknowledged	5 of 5 probes declined; 0 values stored
D3	The agent never implies a tracking record or a live system integration	0 instances across all runs
D4	Off-topic and irrelevant questions get a brief non-answer and the question on the table is put back. Where the agent does not hold an answer it says so rather than producing a figure, date, name or policy	26 prompts; 26 of 26 return to the question; 0 invented answers
D5	At the start of the session the agent reads the advisor's context from a SharePoint list. Every other value comes from the conversation	4 fields read at start — name, role, Lead IA code, prior-year figures; 0 of those asked in conversation
D6	One fiscal-year convention is applied consistently	1 convention, in 100% of agent utterances
D7	The agent runs in Copilot Studio and can be opened and demonstrated live from a Tactable machine	1 environment; 0 dependencies on BMO systems

Deliberately Dropped (no custom prompting)

Item	What it would involve
Keyword navigation	Reaching a topic by typing a word belonging to it, rather than opening the menu
Carrying answers forward when volunteered early	Holding information the advisor gives ahead of its topic, then confirming it when that topic arrives rather than asking again
Coaching that varies by role	Three variants so the framing, examples and option lists suit IA, IC or PB
Next steps as structured records	Each action stored separately with its own owner, date and measure of progress
Restating qualitative answers back to the advisor	Putting each qualitative answer back in business-forward language as it is given, and offering to keep it or answer again
Intent analysis of advisor input	Working out what an advisor turn means — an answer, a request to go elsewhere, a question back — and routing on that interpretation
Answering questions the advisor asks back	Recognising that a turn is a question rather than an answer, answering it, then returning to the question on the table

Appendix A · Values the agent holds

Variables held throughout the conversation.

Value	Source	What it holds
Advisor name	Pre-loaded	The advisor's name, used throughout the conversation
Advisor role	Pre-loaded	IA, IC or PB
Lead IA code	Pre-loaded	The advisor's code, carried into the plan
Revenue projection, F26	Pre-loaded	Where revenue is expected to land this year. The base for the growth calculation
Revenue goal, F27	Advisor	Next year's revenue target
Revenue growth	Calculated	The growth the goal implies, to one decimal. Never asked
Net new assets projection, F26	Pre-loaded	Where net new assets are expected to land this year
Net new assets goal, F27	Advisor	Next year's net new assets target
Net new assets growth	Calculated	As above, for net new assets
Internal referral revenue, F26	Pre-loaded	Revenue from referrals inside BMO this year
Internal referral target, F27	Advisor	Next year's internal referral target
Internal referral growth	Calculated	As above, for internal referrals
External referral revenue, F26	Pre-loaded	Revenue from referrals outside BMO this year
External referral target, F27	Advisor	Next year's external referral target
External referral growth	Calculated	As above, for external referrals
Selected strategy	Advisor	The single strategy for the year, from a list of six
Strategy in the advisor's words	Advisor	Their own wording, captured only when they choose Other
Primary referral line of business	Advisor	The line of business the referral strategy will focus on
Support asks	Advisor	The people, tools or partners the advisor says would help
Support asks, restated	Generated	The same, in business-forward language for the summary
Objective	Advisor	What the advisor wants to achieve, in their own words
Objective, restated	Generated	The same, in business-forward language
Success definition	Advisor	What success looks like by year end, where the objective needed sharpening
Current state	Advisor	Where the advisor is starting from, relative to the objective
Current state, restated	Generated	The same, in business-forward language
Options considered	Advisor	The strategies raised before narrowing down
Selected option	Advisor	The one option the advisor commits to
Selected option, restated	Generated	The same, in business-forward language
Next steps	Advisor	The actions the advisor commits to, as one value

Value	Source	What it holds
Next steps, restated	Generated	The same, in business-forward language
Review cadence	Advisor	Monthly or quarterly
Plan confirmed	Advisor	The advisor has seen the summary and agrees it is right
Submitted	Advisor	The advisor pressed submit. A demonstration only — nothing is filed

The agent also holds a status marker per topic, used to decide what is outstanding. These are internal and are not part of the plan.
